

WATERPROOFING INK ON TISSUE

By Ed Lamb

*An article published long ago The Windy Sock, Joe Josephs
Editor*

I have successfully used white vinegar, sprayed on, to waterproof the ink markings on tissue. There have been reports on the internet that this works also on ink jet markings as well. Best to spray it on lightly and immediately it off any wire fittings to prevent rusting. The long-term effects on tissue, balsa and adhesive are unknown. (Ed. Note: I've not heard of this, but if anyone has used this technique I'd like to hear your experience)
